

## Securely message teams, anywhere

Security and compliance are a mandatory requirement and top priority for today's enterprises. With communications that connect people and applications across devices and regions, it is important to pick a system that provides maximum control and flexibility for dealing with emerging threats and complying with new laws such as GDPR and the CLOUD Act.

Mattermost addresses all the biggest challenges in this area, providing:

- Secure, on-premise installation in your data center with layered security options (e.g, SSL, load balancer and DMZ)
- Internal data storage on a database that you own (MySQL or PostgreSQL)
- TLS encryption (AES-256) with a 2048-bit RSA for data transmissions
- The ability to create retention policies and deletion rules on a central console
- Internal connection to tools like Jenkins, Jira and GitHub
- Operation behind your firewall; no need to send Active-Directory data over a public network
- SSO (single sign-on) and MFA (multi-factor authentication) out of the box

Mattermost empowers technology organizations to adapt and thrive in a fast-changing, security-conscious world. Mattermost offer the industry's most secure and flexible enterprise messaging workspace across web, PC and mobile.

Customers deploying Mattermost dramatically increase their agility, efficiency and innovation by bringing all team communication into one place, connecting to any system on any cloud with any user. Pull key stakeholders and contributors into conversations and decision making, where they can easily connect to their internal and external tools with Mattermost's open plugin architecture.

### Mattermost Enterprise Edition

- Secure and flexible workspace messaging across all platforms, web, PC and mobile within private networks and externally with VPN and EMM integration
- Modern 1-1 and group messaging, file sharing, continuous archiving, unlimited integrations, unlimited search and support for 14 languages
- Easy to use as a single Linux binary with database options like MySQL and PostgreSQL
- Enterprise-grade corporate directory integration, high-availability clusters and advanced access control
- Compliance reporting and central auditing to ensure regulatory compliance e.g. GDPR
- Commercial support, service-level agreements and continuous development of new features

Mattermost is embraced by leading organizations in financial services, government, manufacturing, research, utilities, online services and many other industries. From piloting spacecraft and ensuring national security to building electric cars and advancing vital infrastructure, enterprises use Mattermost daily to change the world.

*After months of testing and vendor vetting, we zeroed in on Mattermost. It exceeded our performance expectations and aligned nicely with Uber's existing tech stack.*  
— Uber Engineering

*We aim to reduce our time to repair through tooling by improving our monitoring with Prometheus and introducing ChatOps with Mattermost.*  
— ING Netherlands, DevOps Engineer

*Mattermost has already absorbed the majority of our existing Slack users... Employee satisfaction has definitely improved since we introduced Mattermost.*  
— Wargaming, Inc. Global IT Director
